	had the prototype eyepieces ready for the implant inspection et-up" procedure and a slide of the instrument were not complete efore, the contract can not be terminated until these items are	d;
II.	The following subjects were covered in the inspection:	
	1. There appeared to be no loss in resolution with the addition of the anamorphic eyepieces to the basic microscope.	
	2. The only aberration that was noticed was minor chromatic aberration at the maximum anaporphic stretch. Astignatism, curvature of field, flare, barrel and pincushion distortion and spherical aberration were not apparent.	
	3. There was still a small anamorphic effect at the unity setting.	
	4. The interpupilary range was from 57mm to 80mm. The desired minimum is 55mm.	
	5. There is a loss of contrast when employing these eyepleces with the zoom 70 microscope. Claims that this can not be avoided.	25X1.
	6. will provide a cost estimate for these units in production quantities.	25X1
	7. The general appearance of the eyepieces was good and the lens elements were clean.	
	8. had added more set screws, as directed, to prevent loosening of the parts during extended usage.	25X1
	9. The image as presented at the image plane, remains inverted	1.
	A single prototype eyepiece was returned to and one pair delivered to the technical monitor.	25X1A

(When Filled In)

GROUP 1 Excluded from automatic downgrading and declassification

Approved For Release 2001/07/16: CIA-RDP78B04747A002400010010-4

The period of performance was from 1 May to 1 Accust 1964.

had not completed the contract by 1 August, and had completed only

preliminary models by 4 September. These models were not acceptable as

deliverable items. then promis d to have the deliverable models

completed by 31 November but on 24 November they informed the monitor that

they would be delayed until 14 December.
